

PepsiCo Growth Strategy & Brand Portfolio Analysis

An interactive dashboard analyzing PepsiCo's \$94B revenue business, built from their publicly available CAGNY 2026 investor presentation.

Live Dashboard: <https://poojaajaykumar.github.io/pepsico-growth-analysis/>

The “So What” Key Insights

1. PepsiCo is a snacks company first.

58% of revenue comes from convenient foods, not beverages. The acquisition of Siete and brand extensions like Doritos Loaded signal a deeper bet on the food's portfolio. The “Pepsi” in PepsiCo is increasingly a secondary revenue driver.

2. Acquisitions tell the strategic story.

Poppi (functional soda), Siete (multicultural cuisine), Celsius & Alani Nu (energy partnerships) all point to health-conscious, culturally diverse, premium positioning. Meanwhile, divesting Tropicana and Aquafina exits low-margin commodity categories. The portfolio is being rebuilt around where consumer preferences are heading, not where they've been.

3. AI-powered marketing is a core strategic priority.

PepsiCo explicitly calls out AI-powered marketing alongside digital twins and next-gen go-to-market as part of their tech-enabled transformation. For marketing analysts, the role is evolving from dashboard builders to AI workflow architects operating at \$94B scale.

What I Built

Interactive Dashboard (HTML + Chart.js)

- Revenue breakdown — Foods vs Beverages, North America vs International
- Growth trajectory — 7% organic revenue CAGR, +40% net revenue since 2019
- Brand portfolio map — 30+ billion-dollar brands across categories
- Strategic priorities — Faster / Stronger / Better framework visualization
- Acquisition strategy — What Poppi, Siete, and the Tropicana divestiture tell us
- Dividend history — 54 consecutive years of increases, 7% CAGR
- Q4 2025 performance — Momentum snapshot across key metrics

Data Pipeline

- Extracted financial metrics from PepsiCo's 39-page CAGNY 2026 PDF presentation
- Structured raw slide data into analyzable CSV format
- Built interactive visualizations using Chart.js with responsive design
- Added analytical commentary connecting data points to strategic implications

My Approach

This project started as a simple question: what can a marketing analyst learn from a public investor presentation that isn't obvious from the slides?

The slides show numbers. My dashboard shows patterns:

- I didn't just chart the revenue split I connected it to the acquisition pattern to show that PepsiCo is systematically exiting commodity and entering premium-functional categories
- I didn't just list the brands I mapped acquisitions vs divestitures to reveal the portfolio reshaping strategy

- I didn't just report the growth numbers I highlighted that International (+48%) is outpacing North America (+35%), signaling where future growth will come from

The goal was to demonstrate that marketing analytics isn't about reproducing data it's about finding the story the data is telling and making it actionable.

Tech Stack

Python (Pandas): Data extraction and CSV structuring

Chart.js: Interactive charts and visualizations

HTML/CSS: Dashboard layout and responsive design

Data Source

All data extracted from PepsiCo's CAGNY 2026 Company Presentation (February 2026).

- Source: pepsico.com/investors → Events and Presentations
- Financial metrics include both GAAP and non-GAAP measures as defined by PepsiCo
- Market share data based on Euromonitor and Circana (Total US MULOC+, 52 weeks ending January 11, 2026)
- No proprietary or confidential data was used

Project Files
